

AuditMatic®

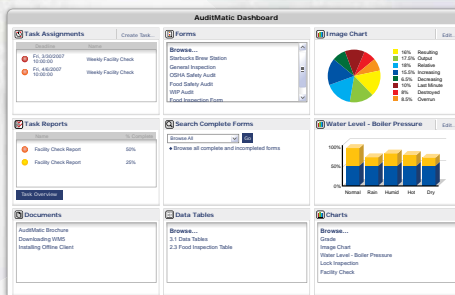

Manufacturing Solutions

Throw away your clipboard and pencil.

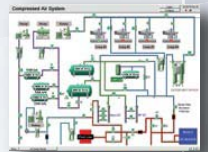

Mobile data collection and decision support

AuditMatic is an easy-to-implement mobile-worker task management, data collection and decision support solution that replaces paper forms with handheld computers. AuditMatic enforces timely and complete operator rounds, ensures best practices are followed by field workers and eliminates manual transcription into Plant Historians and other back office systems.

Integrate with your plant Historian

AuditMatic can be easily configured to automatically export collected data to your Plant Historian in near real-time. Supported Historians include:

- Rockwell FactoryTalk® Historian
- OSI Soft PI®
- Wonderware Data Historian®
- Wonderware InSQL®
- GE Proficy®

Collect the data you want, when you want, the way you want.

AuditMatic allows field workers to use rugged PDAs, web browsers, or smart phones to receive their tasks and collect vital field intelligence. AuditMatic handheld software has been designed to operate without a continuous Internet connection. Users can operate just about anywhere inside or outside your facilities.

Process Improvement

AuditMatic helps reduce downtime and product waste by ensuring comprehensive and timely equipment and process checks occur and that mobile workers have decision support information at their fingertips to guide appropriate corrective action in the field.

Make informed decisions and act quickly.

Rapid field intelligence reduces reporting turn-around time to minutes rather than days or weeks. AuditMatic can enhance data gathering by adding new elements to reports, including images. With AuditMatic, management can act quickly to increase production, respond to recurring issues, protect brand integrity and share best practices throughout the enterprise. In business, what you don't know can hurt you.

DIY—No programmers need apply.

AuditMatic is designed for non-IT users to setup and manage. No programming knowledge is needed. Simply access the intuitive web-based AuditMatic Manager from a web-browser to organize users, publish forms, assign tasks and view and share data in real time.

Inherently Efficient

AuditMatic enables companies to save time and money by eliminating transcription and report-generation labor associated with legacy paper or spreadsheet data-collection methods.
